

Robert Pham

Product Designer

robert@truo.studio | LinkedIn | GitHub | Portfolio | Toronto, Ontario, Canada

Product Designer specializing in AI-first products and end-to-end execution. I design from identity through implementation, using Claude Code to ship production interfaces without an engineering dependency. My work spans generative AI platforms, developer infrastructure, blockchain, and B2B SaaS, with a focus on systems thinking and craft at every level.

CORE SKILLS

UX & Strategy: Journey Mapping, Prototyping, Interaction Design, User Testing, Onboarding Optimization

Artificial Intelligence: Generative AI, Computer Vision, LLM Integration, AI Product Design, AI Product Strategy

Design Tools: Figma, Paper, Framer, Spline (3D), Cursor, Affinity

Engineering: Claude Code, Git & GitHub, Component Libraries, Design Systems, Responsive Layouts, Accessibility

Soft Skills: Stakeholder Collaboration, Design Handoff, Presentation, Self-directed Learning

WORK EXPERIENCE

Product Designer

Jan 2026 – Present

Uniblock | Toronto, Remote

- Led end-to-end rebrand covering identity, visual language, and every product surface from the API catalog to pricing.
- Redesigned the documentation experience; drove a 20% increase in time-on-page and a 10% reduction in bounce rate.
- Rebuilt onboarding to cut setup friction and improve developer activation, driving 30% more signups.
- Built a shared component library in Claude Code with embedded agent context, letting AI tools contribute without breaking the design system.
- Enabled PMs to ship a working prototype in 24 hours, helping close deals with Wealthsimple and Polymarket.
- Produced investor and sales pitch materials supporting fundraising and enterprise positioning.

Product Designer

Apr 2025 – Present

Makiverse & CRP | Toronto, Remote

- Sole designer for a full-stack generative AI platform, owning every surface from character generation and the manga editor to storefront and subscription flows.
- Designed for dual audiences: human users and an autonomous AI agent that navigates the full platform and generates characters, panels, and finished manga from a single prompt.
- Solved character consistency in generative AI with the ML team, making complex model behavior invisible to users.
- Established a unified design language from scratch, structured to scale as new features ship.
- Ship design to production end-to-end with Claude Code, removing the engineering handoff dependency.

Product Designer

Jul 2023 – Dec 2025

dApp Technology Inc | Toronto, Remote

- Designed end-to-end UX for NestEgg and NFT minting; supported 63K+ mints and 70K+ transactions, exceeding KPIs by 7x.
- Designed Pump Pals Token Launcher, a no-code tool to launch ERC-20 tokens, configure unlocks, and manage vesting.
- Designed the JOY Genesis handheld gaming device and its marketing site; launch reached 280K+ impressions and grew its X following by 20,000.
- Aligned design across multiple blockchain grant-funded initiatives with scalable UI systems.

Professional Esports Player & Team Manager

Jun 2021 – Oct 2023

FaZe Clan, Immortals & Complexity Gaming | Los Angeles

- Competed at the highest level of professional VALORANT, including VCT events and global qualifiers.
- As Team Manager at FaZe Clan, led player strategy and match operations for a top-tier North American team under high-stakes conditions.
- Ranked #1 globally in Spectre Divide in 2025.
