

Robert Pham

Product Designer

robert@truo.studio | LinkedIn | GitHub | Portfolio | Toronto, Ontario, Canada

Product Designer specializing in AI-first products and end-to-end execution. I design from identity through implementation, using Claude Code to ship production interfaces without an engineering dependency. My work spans generative AI platforms, developer infrastructure, blockchain, and B2B SaaS, with a focus on systems thinking and craft at every level.

Before design, I competed professionally in VALORANT at Immortals, Complexity Gaming, and FaZe Clan, where I also served as Team Manager. In 2025, I ranked #1 globally in Spectre Divide.

WORK EXPERIENCE

Product Designer

Jan 2026 – Present

Uniblock | Toronto, Remote

- Led end-to-end rebrand for a developer infrastructure company, covering identity, visual language, and every product surface from the API catalog to pricing.
- Redesigned the documentation experience, improving navigation and information hierarchy; drove a 20% increase in time-on-page and a 10% reduction in bounce rate.
- Rebuilt onboarding flows to reduce setup friction and improve developer activation; drove 30% more signups.
- Built a shared component library using Claude Code with embedded agent context, enabling AI tools to contribute to the codebase without breaking the design system.
- Produced investor and sales pitch materials supporting fundraising and enterprise positioning.

Product Designer

Apr 2025 – Present

Makiverse & CRP | Toronto, Remote

- Sole designer for a full-stack generative AI platform, owning every surface from character generation and the manga editor to the storefront and subscription flows.
- Designed for dual audiences: human users and an autonomous AI agent capable of navigating the full platform and generating characters, panels, and finished manga from a single prompt.
- Solved the UX challenge of character consistency in generative AI, working closely with the ML team to make complex model behavior invisible to users.
- Established a unified design language across the entire platform from scratch, structured to scale as new features ship.
- Recently began shipping design to production end-to-end using Claude Code, removing the dependency on engineering handoff.

Product Designer

Jul 2023 – Dec 2025

dApp Technology Inc | Toronto, Remote

- Designed end-to-end UX for NestEgg and NFT minting systems focused on onboarding and gameplay; supported 63K+ mints and 70K+ transactions, exceeding KPIs by 7x.
- Designed Pump Pals Token Launcher, a no-code tool for creators to launch ERC-20 tokens, configure unlocks, and manage vesting.
- Designed the physical handheld gaming device for JOY Genesis alongside its marketing site; the launch campaign reached 280K+ impressions and grew its X following by 20,000 followers.
- Aligned design across multiple blockchain grant-funded initiatives, ensuring scalable UI systems.

Team Manager

Feb 2023 – Oct 2023

FaZe Clan | Los Angeles

- Led player strategy and match operations for a top-tier North American VALORANT team.
- Facilitated team performance and synergy under high-stakes competitive conditions.

Professional Esports Player

Jun 2021 – Jul 2022

Immortals & Complexity Gaming | Los Angeles

- Competed at the highest level of professional VALORANT, including VCT events and global qualifiers.

CORE SKILLS

UX & Strategy: Journey Mapping, Prototyping, Interaction Design, User Testing, Onboarding Optimization

Artificial Intelligence: Generative AI, Computer Vision, LLM Integration, AI Product Design, AI Product Strategy

Design Tools: Figma, Paper, Framer, Spline (3D), Cursor, Affinity

Engineering: Claude Code, Component Libraries, Design Systems, Responsive Layouts, Accessibility

Soft Skills: Stakeholder Collaboration, Design Handoff, Presentation, Self-directed Learning
